1. CUSTOMER SEGMENT(S)

Who is your customer?

- highway division
- Passenger

6. CUSTOMER CONSTRAINTS

5. AVAILABLE SOLUTIONS

What constraints prevent your customers from taking action or limit their choices of solutions?

The impact of the network on the tests was a significant and unexpected element. Given the quantity of sensors, this IoTbased system was successful in simulating a large-scale smart agricultural setting.

Which solutions are available to the customers when they face the problemor need to get the job done? What have they tried in he past? What pros & cons do these solutions have?

Along roadways, static signs with clear directions are put as potential fixes.

2. JOBS-TO-BE-DONE / PROBLEMS

Which jobs-to-be-done (or problems) do you addressfor vour customers?

Among its many duties, the Smartboard Connectivity is in charge of keeping correct temperature sensor readings and informing the board of the speed of the customer's vehicle.

9. PROBLEM ROOT CAUSE

7. BEHAVIOUR

What is the real reason that this problem exists? What is the back story behind the need to do this job?

No sensor readings from the weather would alter the speed restriction if there was no internet connection. Unnecessary pressing of the accident indicator button by some people could lead to problems.

We employ smart linked sign boards as an alternative to

static signboards. With the help of a web app and weather

API, these intelligent connected sign boards automatically

update with the current speed limits. The speed may rise or

fall in response to variations in the weather. The display of diversion signs is determined by traffic and potentially fatal

situations. As appropriate, there are also signs that read

"Guide (Schools), Warning, and Service" (Hospitals,

Restaurants). Using buttons, it is possible to choose from a

variety of operating modes.

What does your customer do to address the problem andget the job done?

As a teacher, the IOT cloud updates the smartboard on the condition of the roads on a regular basis.

3. TRIGGERS

What triggers customers to act? i.e. seeing their neighbour installing

Poor weather conditions prevail. The vehicle should be moving at threshold speed. The sensor value should be shown on the smart board to alert the customer.

4. EMOTIONS: BEFORE / AFTER

How do customers feel when they face a problem or ajob and afterwards?

Clients will feel better after selecting an operation mode with the use of smartboard connectivity, and they will then follow the instructions on the smartboard.

10. YOUR SOLUTION

8. CHANNELS of BEHAVIOUR

3.1 ONLINE

What kind of actions do customers take online?

The departments can receive direct emails or messages from customers. (Officers on nearby patrol).

3.2 What kind of actions do customers take offline?

Following directions is one of the main tasks for the traveller, but they can utilise the smartboard signs to check the state of the road from wherever they are.
